

## Git Project (2.5 Hours)

### Objective:

You will work on a project involving a simple website. You will learn and practice various Git concepts including branching, merging, handling merge conflicts, rebasing, pulling, versioning, and rolling back changes. This project is designed to be completed in 1 hour.

---

### Project Setup (15 minutes)

1. **Install Git:** Ensure Git is installed on your system. Verify with `git --version`.

**Set Up Git:** Configure your Git username and email:

```
git config --global user.name "Your Name"
git config --global user.email "your.email@example.com"
```

2. **Create a GitHub Repository:**
  - Go to GitHub and create a new repository named `website-project`.

Clone the repository to your local machine:

```
git clone https://github.com/your-username/website-project.git
```

3. **Initialize the Project:**

Navigate to the project directory:

```
cd website-project
```

Create initial project structure:

```
mkdir src
touch src/index.html
echo "<!DOCTYPE html><html><head><title>My
Website</title></head><body><h1>Welcome to my
website!</h1></body></html>" > src/index.html
```

Commit and push the initial project structure:

```
git add .
```

```
git commit -m "Initial commit: Added project structure and index.html"
git push origin main
```

---

### Exercise 1: Branching and Basic Operations (10 minutes)

#### Create a New Branch:

```
git checkout -b feature/add-about-page
```

- 1.
2. **Add a New Page:**

Create `about.html`:

```
touch src/about.html
echo "<!DOCTYPE html><html><head><title>About Us</title></head><body><h1>About Us</h1></body></html>" > src/about.html
```

○

Commit and push changes:

```
git add src/about.html
git commit -m "Added about page"
git push origin feature/add-about-page
```

---

### Exercise 2: Merging and Handling Merge Conflicts (15 minutes)

#### Create Another Branch:

```
git checkout main
git checkout -b feature/update-homepage
```

1. **Update the Homepage:**

Modify `index.html`:

```
echo "<p>Updated homepage content</p>" >> src/index.html
```

○

Commit and push changes:

```
git add src/index.html
git commit -m "Updated homepage content"
git push origin feature/update-homepage
```

○

## 2. Create a Merge Conflict:

Modify `index.html` on the `feature/add-about-page` branch:

```
git checkout feature/add-about-page
echo "<p>Conflict content</p>" >> src/index.html
git add src/index.html
git commit -m "Added conflicting content to homepage"
git push origin feature/add-about-page
```

○

## 3. Merge and Resolve Conflict:

Attempt to merge `feature/add-about-page` into `main`:

```
git checkout main
git merge feature/add-about-page
```

○

Resolve the conflict in `src/index.html`, then:

```
git add src/index.html
git commit -m "Resolved merge conflict in homepage"
git push origin main
```

---

## Exercise 3: Rebasing (10 minutes)

### 1. Rebase a Branch:

Rebase `feature/update-homepage` onto `main`:

```
git checkout feature/update-homepage
git rebase main
```

- 
- Resolve any conflicts that arise during rebase.

**Push the Rebased Branch:**

```
git push -f origin feature/update-homepage
```

---

#### Exercise 4: Pulling and Collaboration (10 minutes)

##### 1. Pull Changes from Remote:

Ensure the `main` branch is up-to-date:

```
git checkout main
git pull origin main
```

○

##### 2. Simulate a Collaborator's Change:

- Make a change on GitHub directly (e.g., edit `index.html`).

##### 3. Pull Collaborator's Changes:

Pull the changes made by the collaborator:

```
git pull origin main
```

○

---

#### Exercise 5: Versioning and Rollback (15 minutes)

##### 1. Tagging a Version:

Tag the current commit as `v1.0`:

```
git tag -a v1.0 -m "Version 1.0: Initial release"
git push origin v1.0
```

○

##### 2. Make a Change that Needs Reversion:

Modify `index.html`:

```
echo "<p>Incorrect update</p>" >> src/index.html
git add src/index.html
git commit -m "Incorrect update"
git push origin main
```

○

### 3. Revert to a Previous Version:

Use `git revert` to undo the last commit:

```
git revert HEAD
git push origin main
```

○

Alternatively, reset to a specific commit (use with caution):

sh

Copy code

```
git reset --hard v1.0
git push -f origin main
```

---

## Extra Activities (10 minutes)

### 1. Stashing Changes:

Make some local changes without committing:

```
echo "<p>Uncommitted changes</p>" >> src/index.html
```

○

Stash the changes:

```
git stash
```

○

Apply the stashed changes:

```
git stash apply
```

○

### 2. Viewing Commit History:

Use `git log` to view commit history:

```
git log --oneline
```

○

### 3. Cherry-Picking Commits:

Create a new branch and cherry-pick a commit from another branch:

```
git checkout -b feature/cherry-pick
git cherry-pick <commit-hash>
git push origin feature/cherry-pick
```

○

### 4. Interactive Rebase:

Use interactive rebase to squash commits:

```
git checkout main
git rebase -i HEAD~3
```

## Collaborative Blogging Platform

### Objective:

You will work on a project to collaboratively develop a simple blogging platform. You will practice various Git concepts including branching, merging, handling merge conflicts, rebasing, pulling, versioning, rolling back changes, stashing, and cherry-picking commits. The project is designed to be completed in 1.5 Hours

---

1. **Create a GitHub Repository:**

- Go to GitHub and create a new repository named `blogging-platform`.

Clone the repository to your local machine:

```
git clone https://github.com/your-username/blogging-platform.git
```

○

2. **Initialize the Project:**

Navigate to the project directory:

```
cd blogging-platform
```

○

Create initial project structure:

```
mkdir src
```

```
touch src/index.html
```

```
echo "<!DOCTYPE html><html><head><title>Blogging  
Platform</title></head><body><h1>Welcome to the Blogging Platform!  
</h1></body></html>" > src/index.html
```

○

Commit and push the initial project structure:

```
git add .
```

```
git commit -m "Initial commit: Added project structure and  
index.html"
```

```
git push origin main
```

○

---

## Exercise 1: Branching and Adding Features (20 minutes)

Create a New Branch for Blog Post Feature:

```
git checkout -b feature/add-blog-post
```

1. **Add a Blog Post Page:**

Create `blog.html`:

```
touch src/blog.html
```

```
echo "<!DOCTYPE html><html><head><title>Blog  
Post</title></head><body><h1>My First Blog Post</h1></body></html>"  
> src/blog.html
```

○

Commit and push changes:

```
git add src/blog.html
```

```
git commit -m "Added blog post page"
```

```
git push origin feature/add-blog-post
```

○

---

## Exercise 2: Collaborating with Merging and Handling Merge Conflicts (25 minutes)

Create Another Branch for Author Info:

```
git checkout main
```

```
git checkout -b feature/add-author-info
```

- 1.
2. **Add Author Info to Blog Page:**

Modify `blog.html`:

```
echo "<p>Author: John Doe</p>" >> src/blog.html
```

○

Commit and push changes:

```
git add src/blog.html
```

```
git commit -m "Added author info to blog post"
```

```
git push origin feature/add-author-info
```

○

3. **Create a Merge Conflict:**

Modify `blog.html` on the `feature/add-blog-post` branch:

```
git checkout feature/add-blog-post
```

```
echo "<p>Published on: July 10, 2024</p>" >> src/blog.html
git add src/blog.html
git commit -m "Added publish date to blog post"
git push origin feature/add-blog-post
```

○

#### 4. Merge and Resolve Conflict:

Attempt to merge `feature/add-blog-post` into `main`:

```
git checkout main
git merge feature/add-blog-post
```

○

Resolve the conflict in `src/blog.html`, then:

```
git add src/blog.html
git commit -m "Resolved merge conflict in blog post"
git push origin main
```

○

---

### Exercise 3: Rebasing and Feature Enhancement (25 minutes)

#### 1. Rebase a Branch for Comment Feature:

Rebase `feature/add-author-info` onto `main`:

```
git checkout feature/add-author-info
git rebase main
```

○

- Resolve any conflicts that arise during rebase.

#### 2. Add Comment Section:

Modify `blog.html` to add a comment section:

```
echo "<h2>Comments</h2><p>No comments yet.</p>" >> src/blog.html
git add src/blog.html
git commit -m "Added comment section"
```

```
git push origin feature/add-author-info
```

○

---

#### Exercise 4: Pulling and Simulating Collaboration (20 minutes)

##### 1. Pull Changes from Remote:

Ensure the `main` branch is up-to-date:

```
git checkout main
```

```
git pull origin main
```

○

##### 2. Simulate a Collaborator's Change:

- Make a change on GitHub directly (e.g., edit `blog.html` to add a new comment).

##### 3. Pull Collaborator's Changes:

Pull the changes made by the collaborator:

```
git pull origin main
```

○

---

#### Exercise 5: Versioning and Rollback (30 minutes)

##### 1. Tagging a Version:

Tag the current commit as `v1.0`:

```
git tag -a v1.0 -m "Version 1.0: Initial release"
```

```
git push origin v1.0
```

○

##### 2. Make a Change that Needs Reversion:

Modify `blog.html`:

```
echo "<p>Incorrect comment</p>" >> src/blog.html
```

```
git add src/blog.html
```

```
git commit -m "Incorrect comment update"
```

```
git push origin main
```

○

### 3. Revert to a Previous Version:

Use `git revert` to undo the last commit:

```
git revert HEAD
```

```
git push origin main
```

○

Alternatively, reset to a specific commit (use with caution):

```
git reset --hard v1.0
```

```
git push -f origin main
```

○

---

## Extra Activities (25 minutes)

### 1. Stashing Changes:

Make some local changes without committing:

```
echo "<p>Uncommitted changes</p>" >> src/blog.html
```

Stash the changes:

```
git stash
```

Apply the stashed changes:

```
git stash apply
```

### 2. Viewing Commit History:

Use `git log` to view commit history:

```
git log --oneline
```

### 3. Cherry-Picking Commits:

Create a new branch and cherry-pick a commit from another branch:

```
git checkout -b feature/cherry-pick
```

```
git cherry-pick <commit-hash>
```

```
git push origin feature/cherry-pick
```

### 4. Interactive Rebase:

Use interactive rebase to squash commits:

```
git checkout main
```

```
git rebase -i HEAD~3
```
